So, we see that in the acoustic mode all the atoms move next to synchronously, like inan acoustic wave in homogeneous medium. Contrary, in the optical mode; the gravitycenter remains unperturbed. In an ionic crystal such a vibration produce alternatingdipole moment. Consequently, the mode isoptical active

"A comprehensive guide to solid-state chemistry which is ideal for all undergraduate levels. It covers well the fundamentals of the area, from basic structures to methods of analysis, but also introduces modern topics such as sustainability." Dr. Jennifer Readman, University of Central Lancashire, UK "The latest edition of Solid State Chemistry combines clear explanations with a broad range of topics to provide students with a firm grounding in the major theoretical and practical aspects of the chemistry of solids." Professor Robert Palgrave, University College London, UK Building a foundation with a thorough description of crystalline structures, this fifth edition of Solid State Chemistry: An Introduction presents a wide range of the synthetic and physical techniques used to prepare and characterise solids. Going beyond this, this largely nonmathematical introduction to solid-state chemistry includes the bonding and electronic, magnetic, electrical, and optical properties of solids. Solids of particular interest□porous solids, superconductors, and nanostructures□are included. Practical examples of applications and modern developments are given. It offers students the opportunity to apply their knowledge in real-life situations and will serve them well throughout their degree course. New in the Fifth Edition A new chapter on sustainability in solid-state chemistry written by an expert in this field Cryo-electron microscopy X-ray photoelectron spectroscopy (ESCA) Covalent organic frameworks Graphene oxide and bilayer graphene Elaine A. Moore studied chemistry as an undergraduate at Oxford University and then stayed on to complete a DPhil in theoretical chemistry with Peter Atkins. After a two-year postdoctoral position at the University of Southampton, she joined the Open University in 1975, becoming a lecturer in chemistry in 1977, senior lecturer in 1998, and reader in 2004. She retired in 2017 and currently has an honorary position at the Open University. She has produced OU teaching texts in chemistry for courses at levels 1, 2, and 3 and written texts in astronomy at level 2 and physics at level 3. She was team leader for the production and presentation of an Open University level 2 chemistry module delivered entirely online. She is a Fellow of the Royal Society of Chemistry and a Senior Fellow of the Higher Education Academy. She was co-chair for the successful Departmental submission of an Athena Swan bronze award. Lesley E. Smart studied chemistry at Southampton University, United Kingdom. After completing a PhD in Raman spectroscopy, she moved to a lectureship at the (then) Royal University of Malta. After returning to the United Kingdom, she took an SRC Fellowship to Bristol University to work on X-ray crystallography. From 1977 to 2009, she worked at the Open University chemistry department as a lecturer, senior lecturer, and Molecular Science Programme director, and she held an honorary senior lectureship there until her death in 2016. At the Open University, she was involved in the production of undergraduate courses in inorganic and physical chemistry and health sciences. She served on the Council of the Royal Society of Chemistry and as the chair of their Benevolent Fund.

Gershom Scholem was the master builder of historical studies of the Kabbalah. When he began to work on this neglected field, the few who studied these texts were either amateurs who were looking for occult wisdom, or old-style Kabbalists who were seeking guidance on their spiritual journeys. His work broke with the outlook of the scholars of the previous century in Judaica□die Wissenschaft des Judentums, the Science of Judaism□whose orientation he rejected, calling their □disregard for the most vital aspects of the Jewish people as a collective entity: a form of □censorship of the Jewish past.□ The major founders of modern Jewish historical studies in the nineteenth century, Leopold Zunz and Abraham Geiger, had ignored the Kabbalah; it did not fit into their account of the Jewish religion as rational and worthy of respect by □enlightened□ minds. The only exception was the historian Heinrich Graetz. He had paid substantial attention to its texts and to their most explosive exponent, the false Messiah Sabbatai Zevi, but Graetz had depicted the Kabbalah and all that flowed from it as an unworthy revolt from the underground of Jewish life against its reasonable, law-abiding, and learned mainstream. Scholem conducted a continuing polemic with Zunz, Geiger, and Graetz by bringing into view a Jewish past more varied, more vital, and more interesting than any idealized portrait could reveal. □from the Foreword by Arthur Hertzberg, 1995
