Rational self-interest is often seen as being at the heart of liberal economic theory. In The Power at the End of the Economy Brian Massumi provides an alternative explanation, arguing that neoliberalism is grounded in complex interactions between the rational and the emotional. Offering a new theory of political economy that refuses the liberal prioritization of individual choice, Massumi emphasizes the means through which an individual 's affective tendencies resonate with those of others on infra-individual and transindividual levels. This nonconscious dimension of social and political events plays out in ways that defy the traditional equation between affect and the irrational. Massumi uses the Arab Spring and the Occupy Movement as examples to show how transformative action that exceeds self-interest takes place. Drawing from David Hume, Michel Foucault, Gilles Deleuze, Niklas Luhmann and the field of nonconsciousness studies, Massumi urges a rethinking of the relationship between rational choice and affect, arguing for a reassessment of the role of sympathy in political and economic affairs.

This book constitutes the refereed proceedings of the 8th International Conference on Games and Learning Alliance, GALA 2019, held in Athens, Greece, in November 2019. The 38 regular papers presented together with 19 poster papers were carefully reviewed and selected from 76 submissions. The papers cover the following topics: serious game design and pedagogical foundations; AI and technology for SG; gamification; applications and case studies; and posters. The chapter "Cyber Chronix, Participatory Research Approach to Develop and Evaluate a Storytelling Game on Personal Data Protection Rights and Privacy Risks" is available open access under a CC BY 4.0 license at link.springer.com.

This book presents the essential concepts of operations research and engineering management in a structured manner. Starting with the basic functions of management – planning, organizing, leading and controlling – it introduces the reader to the process of strategic decision-making, covering the essentials of technological invention management, innovation and entrepreneurship, with ample examples of decision-making under certainty, uncertainty and risk conditions. It also exposes the reader to the fundamentals of managing projects and professional communication. In order to reinforce the theory used, practical case studies taken from relevant disciplines are introduced. For instance, case studies from the retail sector have been appended to the assignment problem and cases related to traffic have been introduced for queuing formulation. The concept of game theory is discussed in greater detail with an introduction to topics such as incentive compatibility, Bayesian representations for different games, budget balance, auctions and a broad coverage of mechanism design. While a few of these problems have been solved in the book, a few others have been left un-solved to promote readers ' understanding. The mix of theoretical and practical examples reveals to the reader the underlying complexities and highlights the challenges entailed by field implementation.

While social scientists and historians have been exchanging ideas for a long time, they have never developed a proper dialogue about social theory. William H. Sewall Jr. observes that on questions of theory the communication has been mostly one way, from social science to history. Logics of History argues that both history and the social sciences have something crucial to offer each other. While historians do not think of themselves as theorists, they know something social scientists do not: how to think about the temporalities of social life. On the other hand, while social scientists ' treatments of temporality are usually clumsy, their theoretical sophistication and penchant for structural accounts of social life could offer much to historians. Renowned for his work at the crossroads of history, sociology, political science, and anthropology, Sewall argues that only by combining a more sophisticated understanding of historical time with a concern for larger theoretical questions can a satisfying social theory emerge. In Logics of History, he reveals the shape such an engagement could take, some of the topics it could illuminate, and how it might affect both sides of the disciplinary divide.
