Emergencies:
Diagnosis and

diagnosis is often

The authors define an “emergency” movement disorder as one in which failure to promptly diagnose and treat may result in significant morbidity or

mortality. However, they also stress the importance of certain “can’t miss” diagnoses such as Wilson’s disease, dopa-responsive dystonia, and Whipple’s disease in which delayed diagnosis in less emergent situations can lead

to slowly evolving
and often
irreversible
neurological
damage with tragic
consequences.
