Aquaponics farming involves growing fish and plants in a natural and useful connection. So, you grow fish in a regular fish tank, and after a certain duration you “plant” the seeds. Then you simply take care of the fish and the plants will grow and develop naturally without any more help from you. The aquaponic principle is simple:

[How to build an indoor aquaponics system in 2020 - Organic ...](#)

The key to aquaponics is the natural bacteria found in the growing bed (called the biofilter). The bacteria eat ammonia and turn it into nitrates, which are great food for plants. Without these nitrifying bacteria, the fish would die in their own waste. Without the nitrates, the plants wouldn't have anything to eat.

[Complete Guide to DIY Aquaponics and Aquaponic Gardening](#)

Aquaponics is a combination of two words: aquaculture and hydroponics. Aquaculture means ‘to grow organisms in water’. Hydroponics is growing plants without using soil or earth. Aquaponics is used in agriculture by the combination of both aquaculture and hydroponics in order to grow fish and feed plants at the same time in water basins.

Aquaponic gardening is a great method for raising fish and vegetables together. Aquaponic farming is a sustainable and commercially profitable way of organic farming. The waste of the fish will get converted by bacteria to nitrates, which the plants will feed on. It's a closed loop system. In the beginning you need to test your water frequently but after a few weeks, it doesn't need much maintenance anymore. The fish waste will almost create all the nutrients except a few which you will have to add yourself.

Profitable cold-water fish and vegetable production. Join the aquaponic farming revolution! Built around a proven 120' greenhouse system operable by one person, The Aquaponic Farmer is the game changer that distills vast experience and complete step-by-step guidance for starting and running a cold-water aquaponic farming business—raising fish and vegetables together commercially. Coverage includes: A primer on cold-water aquaponics Pros and cons of different systems Complete design and construction of a Deep Water Culture system Recommended and optional equipment and tools System management, standard operating procedures, and maintenance checklists Maximizing fish and veg production Strategies for successful sales and marketing of fish and plants. As the only comprehensive commercial cold-water resource, The Aquaponic Farmer is essential for farmers contemplating the aquaponics market, aquaponic gardeners looking to go commercial, and anyone focused on high quality food production. Aquaponic farming is the most promising innovation for a sustainable, profitable, localized food system. Until now, systems have largely focussed on warm-water fish such as tilapia. A lack of reliable information for raising fish and vegetables in the cool climates of North America and Europe has been a major stumbling block. The Aquaponic Farmer is the toolkit you need.
