Offering coverage of the entire audit process, this text takes the reader through each audit cycle. It then shows how each step relates to the process as a whole. The book is completely oriented to non-complex computerized accounting systems rather than manual ones.

\*Includes coverage of international standards and global auditing issues, in addition to coverage of PCAOB Auditing Standards, the risk assessment SASs, the Sarbanes/Oxley Act, and Section 404 audits.\*

Appropriate for courses in Auditing and Special Topics in Accounting at the college or university level. Auditing is a second-year (upper-level) course directed at students in pursuit of a professional accounting designation—CA, GGA, and CMA. This innovative and easy-to-understand bestseller offers a mixture of auditing theory and practical applications for those who will work for auditing firms. It provides thorough coverage of the entire audit process, taking the reader step-by-step through an audit cycle, then showing how the process relates to all audit cycles. Reflecting the reality of today's working world, particularly the impact of technology on auditing procedures and techniques, the text has been thoroughly revised and updated, and is completely oriented to the practical application of computers in the field of auditing. It addresses five major issues in this area that have imposed change on the auditing environment: use of computer systems by audit clients; types of computer-based systems used by audit clients; form of working papers used in general practice; student knowledge of automated systems; and integration of automated systems into the review questions, problems, and cases. Students will learn not only auditing procedures, but also how to analyze data.

Principles of Auditing presents auditing from the perspective of an integrated audit complying the Sarbanes Oxley Act (SOX), under the standards of the Public Companies Accounting Oversight Board. It is the first textbook completely authored after SOX, and consequently uses the integrated audit model throughout. In addition, this text also facilitates an understanding of audits of non-public companies. A primary focus is the need for auditors to understand their clients and their industries. Highlighted illustrative industries include: health care providers, retail enterprises, the automotive industry, and the land development and home building industry.

Providing a comprehensive account which brings a wide range of countries to the forefront in terms of both comparability and accountability, this study shines a light on the differences in accounting systems between states, and fills a gap in the literature by combining these aspects of public sector accounting and auditing within a single book.
