Excerpt:
The Nexus 7 (-sus) is a tablet computer designed and developed by Google in conjunction with Asus. It is the first tablet in the Google Nexus series, a line of consumer devices implementing the Android operating system and built by an original equipment manufacturer (OEM) partner. The Nexus 7 features a 7-inch (180 mm) display, an Nvidia Tegra 3 quad-core chip, 1 GB of RAM, and 8, 16 or 32 GB of internal storage. Incorporating built-in Wi-Fi and near field communication (NFC) connectivity, it is marketed as an entertainment device with integration with Google Play, serving as a platform for multimedia consumption of e-books, television programs, films, games, and music. The tablet was the first device to ship with Android version 4.1, nicknamed "Jelly Bean." Design work on the Nexus 7 began in January 2012 after a meeting between executives of Google and Asus at International CES. The device's design was based on Asus' Eee Pad MeMO ME370T tablet that had been showcased at the conference. Following a rapid four-month development period in which the device was modified to reach a US\$199 price point, mass production of the Nexus 7 started in May 2012. It was unveiled at Google I/O, Google's annual developer conference, on June 27, 2012, and became available for pre-order through Google Play on the same day. Shipping commenced in mid-July to Australia, Canada, the United States, and the United Kingdom, and releases in France, Germany, and Spain followed in August. Google expanded the Nexus 7 lineup in October 2012 with the...

An excellent Guide of CyanogenMod. There has never been a CyanogenMod Guide like this. It contains 99 answers, much more than you can imagine; comprehensive answers and extensive details and references, with insights that have never before been offered in print. Get the information you need--fast! This all-embracing guide offers a thorough view of key knowledge and detailed insight. This Guide introduces what you want to know about CyanogenMod. A quick look inside of some of the subjects covered: Motorola Xoom - Software, Index of Android OS articles - C, Motorola Droid - Root access and unsupported Android releases, Gerrit (software) - Notable users, Android (operating system) - Open-source community, CyanogenMod - Tools, Asus Transformer Pad TF300T - Custom ROM Developent, Motorola Backflip - Overclocking, Samsung i9000 Galaxy S - Android 4.0 and later, CyanogenMod - Firmware history and development, CyanogenMod - CyanogenMod 10.1, ClockworkMod, OpenVPN - Platforms, Samsung Galaxy S - Android 4.0 and later, CyanogenMod - CyanogenMod 7, HTC Desire HD - Software, Droid X - Root access, Acer Iconia Tab A500 - Software, HP TouchPad - Android, Android platform - Open-source community, CyanogenMod - CyanogenMod 10.2, TextSecure - Servers, Host card emulation - History, CyanogenMod - CyanogenMod 11, Motorola Defy - Customization, Sony Ericsson Xperia X8 - Software, RootzWiki - Reception, LeWa OS - Operation mode, HTC Magic - Software stack, HTC One SU - Software, LG Nexus 5 - Software, TextSecure - History, Oppo Electronics - Phones, Sony Ericsson Live with Walkman - CyanogenMod and other Operating System replacement, T-Mobile Pulse - Unofficial firmware, Asus Transformer Pad TF701T - CyanogenMod, Samsung Galaxy Mini - Features, Samsung Galaxy Ace 2 - Features, HTC Desire Z - NAND lock, and much more...

This book constitutes the thoroughly refereed post-conference proceedings of the 10th International ICST Conference on Mobile and Ubiquitous Systems: Computing, Networking, and Services, MobiQuitous 2013, held in Tokyo, Japan, in December 2013. The 67 revised full papers presented were carefully reviewed and selected from 141 submissions. The papers and 2 invited talks cover a wide range of topics such as mobile applications, social networks, networking, data management and services.

The book consists of 19 extended and revised chapters based on original works presented during a poster session organized within the 5th International Conference on Computational Collective Intelligence that was held between 11 and 13 of September 2013 in Craiova, Romania. The book is divided into three parts. The first part is titled " Agents and Multi-Agent Systems " and consists of 8 chapters that concentrate on many problems related to agent and multi-agent systems, including: formal models, agent autonomy, emergent properties, agent programming, agent-based simulation and planning. The second part of the book is titled " Intelligent Computational Methods " and consists of 6 chapters. The authors present applications of various intelligent computational methods like neural networks, mathematical optimization and multistage decision processes in areas like cooperation, character recognition, wireless networks, transport, and metal structures. The third part of the book is titled " Language and Knowledge Processing Systems " ,and consists of 5 papers devoted to processing methods for knowledge and language information in various applications, including: language identification, corpus comparison, opinion classification, group decision making, and rule bases.

This book constitutes the refereed proceedings of the IFIP WG 8.4, 8.9, TC 5 International Cross-Domain Conference on Availability, Reliability and Security, CD-ARES 2013, held in Regensburg, Germany, in September 2013. The 21 revised papers presented were carefully reviewed and selected for inclusion in the volume. The papers concentrate on the many aspects of information systems bridging the gap between research results in computer science and the many application fields. They are organized in the following topical sections: economic, ethical, legal, multilingual, organizational and social aspects; context-oriented information integration; data/information management as a service; context-oriented information integration and location-aware computing; security and privacy; risk management and business continuity; and security and privacy and location based applications. Also included are 15 papers from a special session on Human-Computer Interaction and Knowledge Discovery (HCI-KDD 2013).

The two-volume set LNCS 8935 and 8936 constitutes the thoroughly refereed proceedings of the 21st International Conference on Multimedia Modeling, MMM 2015, held in Sydney, Australia, in January 2015. The 49 revised regular papers, 24 poster presentations, were carefully reviewed and selected from 189 submissions. For the three special session, a total of 18 papers were accepted for MMM 2015. The three special sessions are Personal (Big) Data Modeling for Information Access and Retrieval, Social Geo-Media Analytics and Retrieval and Image or video processing, semantic analysis and understanding. In addition, 9 demonstrations and 9 video showcase papers were accepted for MMM 2015. The accepted contributions included in these two volumes represent the state-of-the-art in multimedia modeling research and cover a diverse range of topics including: Image and Video Processing, Multimedia encoding and streaming, applications of multimedia modelling and 3D and augmented reality.

Ergonomics is a human-centered discipline. This is particularly true for healthcare systems and patient safety where the human ' s well-being will undergo critical impacts if solutions are not properly designed and practiced. Effective handling of these concerns involves knowledge from healthcare work (e.g., shift work, patient handling, and medical teamwork), to safety research (resilience, medical process control, intensive care, surgery/anesthesiology, and patient involvement), and to more general issues such as community participation in public affairs. To pursue the mission, the Healthcare System Ergonomics and Patient Safety (HEPS) commenced its first conference in Florence, Italy in 2005. Following the founding success, HEPS became an IEA-sponsored event and the series subsequently took place in Strasbourg, France in 2008, and in Oviedo, Spain in 2011. The three remarkable conferences have forged a world-class platform for researchers and practitioners from around the globe to exchange and disseminate the knowledge in HEPS. This volume contains the selected papers presented at the Fourth International conference on HEPS, held from June 23 to 26, 2014 in Taiwan. The Fourth HEPS, organized by the Ergonomics Society of Taiwan (EST) and endorsed by the International Ergonomics Association (IEA), aims to consolidate the knowledge bridged between ergonomics research and healthcare practices for the safety and welfare of patients. Researchers, professionals, and practitioners in ergonomics and healthcare around the world have shared their wisdom, experience, insights, and visions on past, current and future efforts in healthcare systems ergonomics and patient safety. The papers contributing to this book address the latest research, applications and practices in accordance with the theme of the conference, "Bridging Research and Good Practices towards Patients Welfare," and cover the following areas: "Aging and Healthcare System", "Healthcare, Mobil Application and Usability", "Safety, Hazards and MSDs", "Simulation, Modeling and Decision Making", "Environment and System Design", and "Human Factors and Product Design".

Manual pr á ctico de direcci ó n de hoteles, marketing y ventas online del siglo XXI es el primer libro de La C á tedra Hotelera, una colecci ó n de publicaciones relacionada con la gesti ó n de establecimientos hoteleros. El presente manual est á pensado para que sirva de gu í a y ayuda a numerosos profesionales del sextos, especialmente a los estudiantes y m á steres de las escuelas de turismo que deseen ahondar en las t é cnicas de la gesti ó n hotelera a trav é s de diversos casos pr á cticos y testados: Estos casos van desde la comercializaci ó n tradicional a las modernas estrategias y t é cnicas de ventas online. Adem á s el libro ofrece un amplio abanico de soluciones en el campo de dise ñ o de nuevos hoteles diferenciados de la competencia.

"Embedded Linux mit dem Raspberry Pi" zeigt den Einsatz von Linux auf der popul ä ren Hardware-Plattform Raspberry Pi. Der Untertitel „f ü r Ein- und Umsteiger " soll gleichzeitig verdeutlichen, an wen als Leser mit diesem Buch prim ä r gedacht ist. Hier geht es nicht um Linux als alternatives Betriebssystem f ü r den PC, sondern den Einsatz von Linux in einem Embedded System und um das Embedded System selbst. Die Komplexit ä t heutiger Anforderungen an Elektronikkomponenten ist an vielen Stellen mit den klassischen Konzepten um Mikrocontroller kaum umsetzbar. Hinzu kommt der Preiszerfall in diesem Sektor, der f ü r den Einsatz leistungsf ä higer 32-Bit-Mikrocontroller, wie ARM- oder Cortex-Derivate, spricht. W ä hrend die leistungschw ä cheren (8-Bit-) Mikrocontroller meist ohne Betriebssystem betrieben w ü rden, kommt man bei den 32-Bit-Mikrocontrollern kaum noch um den Einsatz eines Betriebssystems herum. Das Betriebssystem bietet Schnittstellentreiber, Dateisystem, Multi-Threading u.a. und ü bernimmt damit wiederkehrenden Aufgaben, f ü r die stabile Softwarekomponenten zur Verf ü gung stehen. Leistungsf ä hige und schlanke Linux-Derivate k ö nnen heute auch auf einfacheren Prozessoren eingesetzt werden und sind frei verf ü gbar. Die verwendete Linux-Distribution Raspbian stellt einen grafischen Desktop zur Verf ü gung, der hier aber nicht von prim ä rem Interesse ist. Unser prim ä res Userinterface hier ist klassisch die Kommandozeile, wie sie vielen Mikrocontroller-Programmierern aus deren Projekten als Terminal-Schnittstelle bekannt ist. Ein grafisches Userinterface ist f ü r viele geschlossene Embedded Systems (deeply embedded) ohnehin nicht erforderlich, oder kann durch ein Web-Interface ersetzt werden. Mit dem Einsatz von Linux in einem Embedded System kommt eine Reihe von neuen Ans ä tzen auf den Umsteiger aus der konventionellen Mikrocontrollerwelt zu, mit denen wir uns hier erst einmal auseinandersetzen werden. Alle gelisteten Quelltexte und einige Erl ä uterungen sind unter SourceForge abgelegt (http://sourceforge.net/projects/raspberrypisnip/). Zum Buch existiert ausserdem eine Webseite http://www.kuehnel.ch/Raspi-Buch.html.
