Branch-and-bound search has been known for a long time and has been widely used in solving a variety of problems in computer-aided design (CAD) and many important optimization problems. In many applications, the classic branch-and-bound search methods perform duplications of computations, or rely on the search decision trees which keep track of the branch-and-bound search processes. In CAD and many other technical fields, the computational cost of constructing branch-and-bound search decision trees in solving large scale problems is prohibitive and duplications of computations are intolerable. Efficient branch-and-bound methods are needed to deal with today's computational challenges. Efficient branch-and-bound methods must not duplicate computations. Efficient Branch and Bound Search with Application to Computer-Aided Design describes an efficient branch-and-bound method for logic justification, which is fundamental to automatic test pattern generation (ATPG), redundancy identification, logic synthesis, minimization, verification, and other problems in CAD. The method is called justification equivalence, based on the observation that justification processes may share identical subsequent search decision sequences. With justification equivalence, duplication of computations is avoided in the dynamic branch-and-bound search process without using search decision trees. Efficient Branch and Bound Search with Application to Computer-Aided Design consists of two parts. The first part, containing the first three chapters, provides the theoretical work. The second part deals with applications, particularly ATPG for sequential circuits. This book is particularly useful to readers who are interested in the design and test of digital circuits.

The essential guide to survival plan essentials! The key to being prepared is to have the things you need ahead of time--before an emergency happens. CLICK HERE to download the first chapter from Wilderness GPS \* Simple, focused, and accessible, Wilderness GPS is for anyone using GPS in an outdoor setting \* Trust us: first-timers need help to use their new backcountry GPS devices \* From the authors of the bestselling Wilderness Navigation (65,000 copies sold) Thousands have learned compass and map skills with the help of father-and-son team Bob and Mike Burns and their straightforward, simply explained book, Wilderness Navigation. Now they've written a book for everyone who has bought a backcountry GPS device and found it inexplicably complicated to use (which includes most of us). Wilderness GPS is an easy-to-use guide to get you navigating the outdoors with your handheld GPS device. Wondering how to choose from the variety of gear and computer programs, or how to use a GPS with your map and compass effectively? Wilderness GPS details this and more including: \* How to select your GPS gear \* Getting started and practice routines \* Different coordinate systems: latitude and longitude vs. Universal transverse Mercator (UTM) \* Routefinding in wilderness settings, including common scenarios \* GPS vs. map and compass routefinding \* Using GPS on water \* Using your GPS with a home computer or mobile "smart" device Bob Burns and Mike Burns are the authors of Wilderness Navigation, a nationally bestselling primer that serves as the official textbook for navigation courses taught by The Mountaineers and other outdoor education centers. Together, they have decades of professional experience in teaching map and compass, GPS, and navigation in the outdoors and have hiked, scrambled, climbed, and snowshoed all over the West Coast and beyond. They both live in Seattle.

The modern electronic testing has a forty year history. Test professionals hold some fairly large conferences and numerous workshops, have a journal, and there are over one hundred books on testing. Still, a full course on testing is offered only at a few universities, mostly by professors who have a research interest in this area. Apparently, most professors would not have taken a course on electronic testing when they were students. Other than the computer engineering curriculum being too crowded, the major reason cited for the absence of a course on electronic testing is the lack of a suitable textbook. For VLSI the foundation was provided by semiconductor device technology, circuit design, and electronic testing. In a computer engineering curriculum, therefore, it is necessary that foundations should be taught before applications. The field of VLSI has expanded to systems-on-a-chip, which include digital, memory, and mixed-signalsubsystems. To our knowledge this is the first textbook to cover all three types of electronic circuits. We have written this textbook for an undergraduate "foundations" course on electronic testing. Obviously, it is too voluminous for a one-semester course and a teacher will have to select from the topics. We did not restrict such freedom because the selection may depend upon the individual expertise and interests. Besides, there is merit in having a larger book that will retain its usefulness for the owner even after the completion of the course. With equal tenacity, we address the needs of three other groups of readers.

A dedicated deer hunter "writes with humor and insight" about his adventures—and misadventures—in the wild (Orlando Sentinel). Every autumn, millions of men and women across the country don their camo, stock up on doe urine, and undertake a quintessential American tradition—deer hunting. The pinnacle of a hunter's quest is killing a buck with antlers that "score" highly enough to qualify for the Boone and Crockett record book. But in all his seasons on the trail, Pete Bodo, an avid outdoorsman and student of the hunt, had never reached that milestone. Sadly, he had to admit it: He was a nimrod. Whitetail Nation is the uproarious story of the season Pete Bodo set out to kill the big buck. From the rolling hills of upstate New York to the vast and unforgiving land of the Big Sky to the Texas ranches that feature high fences, deer feeders, and money-back guarantees, Bodo traverses deep into the heart of a lively, growing subculture that draws powerfully on durable American values: the love of the frontier, the importance of self-reliance, the camaraderie of men in adventure, the quest for sustained youth, and yes, the capitalist's right to amass every high tech hunting gadget this industry's exploding commerce has to offer. Gradually, Bodo closes in on his target—that elusive monster buck—and with each day spent perched in a deer stand or crawling stealthily in high grass (praying the rattlesnakes are gone), or shivering through the night in a drafty cabin (flannel, polar fleece, and whiskey be damned), readers are treated to an unforgettable tour through a landscape that ranges from the exalted to the absurd. Along the way Bodo deftly captures the spirit and passion of this rich American pursuit, tracing its history back to the days of Lewis and Clark and examining that age old question: "Why do men hunt?"

Former naval officer, avid outdoorsman, sportsman, and award-winning journalist V. Paul Reynolds journeys back along the path of his life to revisit and share with readers many of his outdoor experiences. In the 1940s, Paul's father took him to favorite hunting and fishing spots, helping give birth to his son's lifelong love affair with the outdoors. Later, Harvard eventually took his son to his first smoke-filled hunting camp, where amber liquid flowed and profanity filled the room. Reynolds would soon understand how the outdoors could bestow both the love of nature and the joy of friendship.
