This latest edition of the text maintains the clear, accessible, and engaging writing style of past editions with the solid framework of pedagogy that highlights an emphasis on evolution and scientific inquiry that have made this a leading textbook for students majoring in biology and have been enhanced in this landmark Tenth edition. This emphasis on the organizing power of evolution is combined with an integration of the importance of cellular, molecular biology and genomics to offer our readers a text that is student friendly and current. Our author team is committed to producing the best possible text for both student and faculty. The lead author, Kenneth Mason, University of Iowa, has taught majors biology at three different major public universities for more than fifteen years. Jonathan Losos, Harvard University, is at the cutting edge of evolutionary biology research, and Susan Singer, Carleton College, has been involved in science education policy issues on a national level. All three authors bring varied instructional and content expertise to the tenth edition of Biology.

Biology, an authoritative text with a diverse author team, focuses on the process of evolution to explain biodiversity. The book emphasizes problem-solving and the scientific method in its approach to cutting-edge content. The use of historical and experimental approaches offers students not only a current view of the field, but more importantly, how it evolved. The authors have tried to keep as much historical context as possible and provide information within an experimental framework throughout the text.

Biology focuses on evolution as a unifying theme. In revising the text, McGraw-Hill consulted with numerous users, noted experts and professors in the field. Biology is distinguished from other texts by its strong emphasis on natural selection and the evolutionary process that explains biodiversity. The new 8th edition continues that tradition and advances into modern biology by featuring the latest in cutting edge content reflective of the rapid advances in biology. That same modern perspective was brought into the completely new art program offering readers a dynamic, realistic, and accurate, visual program. Entirely NEW Visual Program! The entire art program was redone involving a variety of specialists, artists, and medical illustrators who worked very closely with the author team to provide a phenomenal visual program for readers. This new art program focuses on providing images that focus on difficult concepts and provide a clear, consistent, accurate and easy-to-follow visual explanation. Experimental Focus -- Another theme of Biology is that knowledge arises from experimental work that moves us forward. The use of historical and experimental approaches throughout allow the student to not only see where the field is now, but more importantly, how we arrived there. The authors have tried to keep as much historical context as possible and provide information within an experimental framework throughout the text. Strengthened Evolutionary Emphasis -- From the inception of Biology, evolution has been the underlying theme of the text. The Eighth edition has been written with an even greater focus on evolution, with a significant increase of coverage at the molecular level, a good example is the two new chapters dedicated to molecular evolution. This emphasis creates more depth, balancing the amount of evolutionary coverage throughout. Includes print student edition

Over the course of five editions, the ways in which biology is taught have dramatically changed. We have seen a shift away from the memorization of details, which are easily forgotten, and a movement toward emphasizing core concepts and critical thinking skills. The previous edition of Biology strengthened skill development by adding two new features, called CoreSKILLS and BioTIPS (described later), which are aimed at helping students develop effective strategies for solving problems and applying their knowledge in novel situations. In this edition, we have focused our pedagogy on the five core concepts of biology as advocated by "Vision and Change" and introduced at a national conference organized by the American Association for the Advancement of Science.
