- Suggested videos at the end of each chapter for a Hybrid Learning Experience.

The Five-Factor Model Across Cultures was designed to further an understanding of the interrelations between personality and culture by examining the dominant paradigm for personality assessment - the Five-Factor Model or FFM - in a wide variety of cultural contexts. This volume provides a comprehensive overview of contemporary research and theory about personality traits and culture that is extremely relevant to personality psychologists, cross-cultural psychologists, and psychological anthropologists.

The mission of the International Journal of Educational Reform (IJER) is to keep readers up-to-date with worldwide developments in education reform by providing scholarly information and practical analysis from recognized international authorities. As the only peer-reviewed scholarly publication that combines authors' voices without regard for the political affiliations perspectives, or research methodologies, IJER provides readers with a balanced view of all sides of the political and educational mainstream. To this end, IJER includes, but is not limited to, inquiry based and opinion pieces on developments in such areas as policy, administration, curriculum, instruction, law, and research. IJER should thus be of interest to professional educators with decision-making roles and policymakers at all levels turn since it provides a broad-based conversation between and among policymakers, practitioners, and academicians about reform goals, objectives, and methods for success throughout the world. Readers can call on IJER to learn from an international group of reform implementers by discovering what they can do that has actually worked. IJER can also help readers to understand the pitfalls of current reforms in order to avoid making similar mistakes. Finally, it is the mission of IJER to help readers to learn about key issues in school reform from movers and shakers who help to study and shape the power base directing educational reform in the U.S. and the world.

This book analyses the accountability of European home States for their failure to secure the human rights of victims from host States against transnational enterprises. It argues for a reconfiguration of the relationship between multinational enterprises and individuals, both of which have been profoundly changed by globalisation. Enterprises are now supranational entities with numerous affiliates all over the world. Likewise, individuals are increasingly part of a global community. Despite this, the relationship between the two is deregulated. Addressing this gap, this study proposes an innovative business and human rights litigation strategy. Human rights advocates could file a test case against a European home State, at the European Court of Human Rights, for its failure to secure the rights of victims vis-à-vis European multinational enterprises. The book illustrates why such a strategy is needed, and points to the lack of effective legal remedies against European multinationals. The goal is to empower victims from developing countries against European States which are failing to hold multinational enterprises accountable for human rights abuses.

In recent years, the popularity of virtual worlds has increased significantly and they have consequently come under closer academic scrutiny. Papers about virtual worlds are typically published at conferences or in journals that specialize in something - tirely different, related to some secondary aspect of the research. Thus a paper d- cussing legal aspects of virtual worlds may be published in a law journal, while a psychologist's analysis of situation awareness may appear at a psychology conference. The downside of this is that if you publish a virtual worlds paper at an unrelated conference in this manner you are likely to be one of only a handful of attendees working in the area. You will not, therefore, achieve the most important goal of - tending conferences: meeting and conversing with like-minded colleagues from the academic community of your field of study. Virtual worlds touch on many well-established themes in other areas of science. Researchers from all these fields will therefore be looking at this new, interesting, and growing field. However, to do effective research related to these complex constructs, researchers need to take into account many of the other facets from other fields that impact virtual worlds. Only by being familiar with and paying attention to all these different aspects can virtual worlds be properly understood.
