—Booklist Carrying the Heart is one of those remarkable books that informs and enlightens and entertains on almost every page. In this book, Dr. Gonzalez-Crussi explores our inner organ systems: The Digestive System, Respiratory System, Reproductive System, and the Cardiovascular System. As with all of his books, this one roams widely and draws abundantly from episodes of the history of medicine, examples from literature, philosophic reflections, humor

and biomedical concepts. It aims to amuse and instruct, to enhance our understanding of our internal anatomical organs and systems, and how our understanding of these systems have evolved over history. This is particularly relevant today, when organ transplants and surgical "remodeling" of the body threaten to reduce human nature to a mere mechanism. The book, and its approach, is completely unique, as is Dr. Gonzalez-Crussi's inimitable style.

For a decade now, the authors have been conducting interviews for Hungary's Oral History Archives, with the children of those Hungarians - national heroes, as they are generally seen today - who were imprisoned or executed for their involvement in the 1956 revolution. The vast body of material that has been collected, and is now at the disposal of sociologists, psychologists and others in the academic community, forms the basis of this volume. This is a documentation of memories of the revolt and, more particularly, its aftermath. The virtually spontaneous twelve-day uprising exerted a lasting effect on the fates of the families of the more than 20,000 who were imprisoned and 229 executed by the régime in the harsh reprisals that followed the crushing of the revolution (the last of them as late as the early 1960s), with active police surveillance extended to tens of thousands more. This intimidation, and the attendant social and economic devastation that it wrought, bore especially hard on the psyches, upbringing and education, and hence the subsequent opportunities and life courses of the children who grew up within those families. The material is grouped by theme: e.g. the effects on communication within families, changes in social status, how relatives and friends reacted, and what sorts of problems these children encountered in pursuing their studies, in trying to assimilate into society as adults, and in relating to those fathers who did return. In an appendix, the editors present detailed biographies of the people most directly affected, offering an unparalleled glimpse into the fates of those they interviewed. The documentation includes letters that the children wrote to their

imprisoned fathers and the farewell letters of the executed to their families.

In this moving memoir, a renowned feminist scholar explores the physical and psychological ordeal of living with ovarian cancer.

Brings back the ancient tool of using labyrinths into modern day-consciousness and identifies how the practice can be used to bolster creativity, gain access to intuition, and achieve a deeper spirituality.

In *State of the Heart*, Dr. Haider Warraich takes readers inside the ER, inside patients' rooms, and inside the history and science of cardiac disease. *State of the Heart* traces the entire arc of the heart, from the very first time it was depicted on stone tablets, to a future in which it may very well become redundant. While heart disease has been around for a while, the type of heart disease people have, why they have it, and how it's treated is changing. Yet, the golden age of heart science is only just beginning. And with treatments of heart disease altering the very definitions of human life and death, there is no better time to look at the present and future of heart disease, the doctors and nurses who treat it, the patients and caregivers who live with it, and the stories they hold close to their chests. More people die of heart disease than any other disease in the world and when any form of heart disease progresses, it can result in the development of heart failure. Heart failure affects millions and can affect anyone at anytime, a child recovering from a viral infection, a woman who has just given birth or a cancer patient receiving chemotherapy. Yet new technology to treat heart failure is fundamentally changing just what it means to be human.

Mechanical pumps can be surgically sown into patients' hearts and when patients with these pumps get really sick, sometimes they don't need a doctor or a surgeon—they need a mechanic. In *State of the Heart*, the journey to rid the world of heart disease is shown to be reflective of the journey of medical science at large. We are

learning not only that women have as much heart disease as men, but that the type of heart disease women experience is diametrically different from that in men. We are learning that heart disease and cancer may have more in common than we could have imagined. And we are learning how human evolution itself may have led to the epidemic of heart disease. In understanding how our knowledge of the heart evolved, *State of the Heart* traces the twisting and turning road that science has taken—filled with potholes and blind turns—all the way back to its very origin.

We recognize the names, beginning with Adam, Eve, Cain and Abel. Their mythic lives and the commentaries about them are bedrock elements of Western civilization. But what if we relinquished the hal-~~lowed~~ ground of perceived wisdom and considered Martin Buber's instruction, presented as an epigraph to this book, to approach the text as something new, letting the words of the Book of Genesis reach us? Could we encounter the sacred heart of these mysterious stories as if for the first time?

In *The Small Heart of Things*, Julian Hoffman intimately examines the myriad ways in which connections to the natural world can be deepened through an equality of perception, whether it's a caterpillar carrying its house of leaves, transhumant shepherds ranging high mountain pastures, a quail taking cover on an empty steppe, or a Turkmen family emigrating from Afghanistan to Istanbul. The narrative spans the common—and often contested—ground that supports human and natural communities alike, seeking the unsung stories that sustain us. Guided by the belief of Rainer Maria Rilke that “everything beckons us to perceive it,” Hoffman explores the area around the Prespa Lakes, the first transboundary park in the Balkans, shared by Greece, Albania, and the former Yugoslav Republic of Macedonia. From

there he travels widely to regions rarely written about, exploring the idea that home is wherever we happen to be if we accord that place our close and patient attention. *The Small Heart of Things* is a book about looking and listening. It incorporates travel and natural history writing that interweaves human stories with those of wild creatures. Distinguished by Hoffman's belief that through awareness, curiosity, and openness we have the potential to forge abiding relationships with a range of places, it illuminates how these many connections can teach us to be at home in the world.
