Masonry walls constitute the interface

between the building's interior and the outdoor environment.

Masonry walls are traditionally composed of fired-clay

Acces PDF

Chapter 22earth

bricks (solid or perforated) or blocks (concrete or earth-based), but in the past (and even in the present) they were often associated as needing an extra special thermal and acoustical insulation layer. However,

Section 22.4

over more recent years investigations on thermal and acoustical features has led to the development of new improved bricks and blocks that no longer need these insulation layers.

Acces PDF

Chapter 22earth

Traditional masonry units (fired-clay bricks, concrete or earth-based blocks) that don't offer improved performance in terms of thermal and acoustical insulation are a symbol of a low-technology past,

removed from the
demands of

on the eco-

masonry units,
particular
emphasis is

placed on the design, properties, performance, durability and LCA of these materials. Since masonry units are also an excellent way to reuse bulk industrial waste the book will be important in the
