Soon to be a Netflix Original Series! "Wildly imaginative." —President Barack Obama on The Three-Body Problem trilogy This near-future trilogy is the first chance for English-speaking readers to experience this multiple-award-winning phenomenon from Cixin Liu, China's most beloved science fiction author. In The Dark Forest, Earth is reeling from the revelation of a coming alien invasion-in just four centuries' time. The aliens' human collaborators may have been defeated, but the presence of the sophons, the subatomic particles that allow Trisolaris instant access to all human information, means that Earth's defense plans are totally exposed to the enemy. Only the human mind remains a secret. This is the motivation for the Wallfacer Project, a daring plan that grants four men enormous resources to design secret strategies, hidden through deceit and misdirection from Earth and Trisolaris alike. Three of the Wallfacers are influential statesmen and scientists, but the fourth is a total unknown. Luo Ji, an unambitious Chinese astronomer and sociologist, is baffled by his new status. All he knows is that he's the one Wallfacer that Trisolaris wants dead. The Three-Body Problem Series The Three-Body Problem The Dark Forest Death's End Other Books Ball Lightning Supernova Era To Hold Up The Sky (forthcoming) At the Publisher's request, this title is being sold without Digital Rights Management Software (DRM) applied.

Matching DNA samples from crime scenes and suspects is rapidly becoming a key source of evidence for use in our justice system. DNA Technology in Forensic Science offers recommendations for resolving crucial questions that are emerging as DNA typing becomes more widespread. The volume addresses key issues: Quality and reliability in DNA typing, including the introduction of new technologies, problems of standardization, and approaches to certification. DNA typing in the courtroom, including issues of population genetics, levels of understanding among judges and juries, and admissibility. Societal issues, such as privacy of DNA data, storage of samples and data, and the rights of defendants to quality testing technology. Combining this original volume with the new update--The Evaluation of Forensic DNA Evidence--provides the complete, up-to-date picture of this highly important and visible topic. This volume offers important guidance to anyone working with this emerging law enforcement tool: policymakers, specialists in criminal law, forensic scientists, geneticists, researchers, faculty, and students.

Bales examined "the connection between environmental decline and slavery: the two almost always went hand-in-hand, whether in the hellish gold mines of Ghana or the miraculously beautiful mangrove forests of Bangladesh. But why? He set off to find the answer on a ... journey that took him into the lives of modern day slaves and along a supply chain that leads directly to the cell phones in our pockets"--

Tomie Kawakami is a femme fatale with long black hair and a beauty mark just under her left eye. She can seduce nearly any man, and drive them to murder as well, even though the victim is often Tomie herself. While one lover seeks to keep her for himself, another grows terrified of the immortal succubus. But soon they realize that no matter how many times they kill her, the world will never be free of Tomie. -- VIZ Media

THE SELF-PUBLISHED PHENOMENON —NOW FULLY REVISED AND EXPANDED I almost didn ' t publish Love Yourself Like Your Life Depends on It. Here I was, a CEO who ' d fallen apart after his company failed, writing a book about how loving himself saved him. I thought I ' d be a laughingstock and my career would be finished. But I stepped through the fears and shared my truth with the world. The book went viral. Amazing people all over bought copies for friends and family. For some, this book saved their lives. For others, it was the first time they ever loved themselves. Many readers reached out and asked questions. This taught me that, to create lasting impact, I had to go deeper. So, seven years later, here it is. All the questions I received, resolved. My intention is that by the time you finish this new edition, not only will you be committed to loving yourself, you ' ll know exactly how to do it. And, most importantly, how to make it last.

A major work by this prominent Caribbean author and philosopher, available for the first time in English

In recent years American colleges and universities have become the locus of impassioned debates about race-conscious social policies, as conflicting theories clash over the ways to distribute the advantages of higher education in a fair and just manner. Just below the surface of these policy debates lies a complex tangle of ideologies, histories, grievances, and emotions that interfere with a rational analysis of the issues involved. As never before, the need for empirical research on the significance of race in American society seems essential to solving the manifest problems of this highly politicized and emotionally charged aspect of American higher education. The research evidence presented in this book has a direct relevance to those court cases that challenge race-conscious admission policies of colleges and universities. Though many questions still need to be addressed by future research, the empirical data collected to date makes it clear that affirmative action policies do work and are still very much needed in American higher education. This book also provides a framework for examining the evidence pertaining to issues of fairness, merit, and the benefits of diversity in an effort to assist courts and the public in organizing beliefs about race and opportunity.

In 1992 the National Research Council issued DNA Technology in Forensic Science, a book that documented the state of the art in this emerging field. Recently, this volume was brought to worldwide attention in the murder trial of celebrity O. J. Simpson. The Evaluation of Forensic DNA Evidence reports on developments in population genetics and statistics since the original volume was published. The committee comments on statements in the original book that proved controversial or that have been misapplied in the courts. This volume offers recommendations for handling DNA samples, performing calculations, and other aspects of using DNA as a forensic tool--modifying some recommendations presented in the 1992 volume. The update addresses two major areas: Determination of DNA profiles. The committee considers how laboratory errors (particularly false matches) can arise, how errors might be reduced, and how to take into account the fact that the error rate can never be reduced to zero. Interpretation of a finding that the DNA profile of a suspect or victim matches the evidence DNA. The committee addresses controversies in population genetics, exploring the problems that arise from the mixture of groups and subgroups in the American population and how this substructure can be accounted for in calculating frequencies. This volume examines statistical issues in interpreting frequencies as probabilities, including adjustments when a suspect is found through a database search. The committee includes a detailed discussion of what its recommendations would mean in the courtroom, with numerous case citations. By resolving several remaining issues in the evaluation of this increasingly important area of forensic evidence, this technical update will be important to forensic scientists and population geneticists--and helpful to attorneys, judges, and others who need to understand DNA and the law. Anyone working in laboratories and in the courts or anyone studying this issue should own this book.

This IBM Redbooks publication addresses some of the common problems that customers have experienced on the Linux® on System z™ platform. This book provides a problem determination methodology and tools to help the reader diagnose the problem in an easy-to-read self-help manual. We start with a discussion on how to approach problem solving in the Linux on System z environment and continue on to describe some of the problem determination tools commonly used for z/VM and Linux on system z. We continue with discussions on network problem determination, performance problem determination, and storage problems. Additionally, we discuss the formation of eligible (or eligibility) lists.
