14.1 INTRODUCTION. Automatic stops, or trigger stops, as they are sometimes called, register the strip at the final die station. They differ from finger stops in that they stop the strip automatically, the operator simply keeping the strip pushed against the stop in its travel through the die. For this reason, they are always used when an operator is to feed the strip by hand.

Following introductory material and a discussion of 20 types of dies in Chapter 2, the design process of a representative die is separated into seventeen distinct chapters. Each chapter is one step which is illustrated in two ways; first, as a portion of an engineering drawing, that is, as the component is actually drawn on the design. Second, the die design is shown pictorially in order to improve the user's visualization. In successive sections each step is detailed as it is applied to the design of the various types of dies listed in Chapter 2. Includes English and Metric systems. Covers new methods of producing blanks, such as waterjet cutting and laser cutting. Contains a glossary of terms for the first time. Illustrates each step in pictorial view and as a portion of an engineering drawing. Offers a completely revised chapter on presses and quick die-changing systems and includes the addition of "Quick Die Change Systems".

Hundreds of examples and guidelines detail how to improve your current die designs, or utilize new progressive designs that maximize efficiency while minimizing cost. Examples of the topics covered in the book's nineteen chapters include: punches and dies, stock guides and pilots, strippers, press selection, binding, blank development, design of strips and stampings, carbide dies, die material selection, design practices, EDM, mathematics and angle calculations, lubrication, sensors and die protection, and more.

By showing that kitchen skill, and not budget, is the key to great food, Good and Cheap will help you eat well—really well—on the strictest of budgets.
