Nobel laureate Elias Canetti wrote his novel Auto-da-Fe (Die Blendung) when he and the twentieth century were still quite young. Rooted in the cultural crises of the Weimar period, Auto-da-Fe first received critical acclaim abroad--in England, France, and the United States--where it continues to fascinate readers of subsequent generations. The End of Modernism places this work in its cultural and philosophical contexts, situating the novel not only in relation to Canetti's considerable body of social thought, but also within larger debates on Freud and Freudianism, misogyny and modernism's "fragmented subject," anti-Semitism and the failure of humanism, contemporary philosophy and philosophical fads, and traditionalist notions of literature and escapist conceptions of history. The End of Modernism portrays Auto-da-Fe as

an exemplum of "analytic modernism," and in this sense a crucial endpoint in the progression of postwar conceptions of literary modernism.

Do alliances curb efforts by states to develop nuclear weapons? Atomic Assurance looks at what makes alliances sufficiently credible to prevent nuclear proliferation; how alliances can break down and so encourage nuclear proliferation; and whether security guarantors like the United States can use alliance ties to end the nuclear efforts of their allies. Alexander Lanoszka finds that military alliances are less useful in preventing allies from acquiring nuclear weapons than conventional wisdom suggests. Through intensive case studies of West Germany, Japan, and South Korea, as well as a series of smaller cases on Great Britain, France, Norway, Australia, and Taiwan, Atomic Assurance shows that it is easier to prevent an ally from initiating a nuclear program than to stop an ally that has already started one; in-theater conventional forces are crucial in making American nuclear guarantees credible; the American coercion of allies who started, or were tempted to start, a nuclear weapons program has played less of a role in forestalling nuclear proliferation than analysts have assumed; and the economic or technological reliance of a security-dependent ally on the United States works better to reverse or to halt that ally's nuclear bid than anything else. Crossing diplomatic history, international relations, foreign policy, grand strategy, and nuclear strategy, Lanoszka's book reworks our understanding of the power and importance of alliances in stopping nuclear proliferation.

Given the wide-ranging implications for global competition, domestic political systems and daily life, US policymakers must prepare for the impacts of new artificial intelligence (AI)-related technologies. Anticipating AI's impacts on the global order requires US policy makers' awareness of certain key aspects of the AI-related technologies--and how those technologies will interact with the rapidly changing global system of human societies. One area that has received little in-depth examination to date is how AI-related technologies could affect countries' domestic political systems--whether authoritarian, liberal democratic, or a hybrid of the two--and how they might impact global competition between different regimes. This work highlights several key areas where AI-related technologies have clear implications for globally integrated strategic planning and requirements.

An innovative volume of fifteen interdisciplinary essays at the nexus of material culture, performance studies, and game theory, *Playthings in Early Modernity* emphasizes the rules of the game(s) as well as the breaking of those rules. Thus, the titular "plaything" is understood as both an object and a person, and play, in the early modern world, is treated not merely as a pastime, a leisurely pursuit, but as a pivotal part of daily life, a strategic psychosocial endeavor.
