Biological Bases of Individual Behavior contains a mixture of papers from East and West. The book can be organized into two parts. The articles in the first part, which might broadly be termed "physiological", examine a number of questions relating to the physiological constitution

and to methods of measuring the properties of the nervous system. This section opens with one of Teplov's last papers, which contains a lucid exposition of the main results of research carried out in 1964 in the laboratory he directed. The other articles in this section elucidate the use of electroencephalographic and Chronometrie methods of studying the properties of the nervous system; examine problems of sensitivity and "partiality" in the manifestation of the basic properties; and present the results of experiments conducted to study the correlations between certain

properties of the nervous system and features of the human constitution, as well as between age and neurodynamic factors. The second part of the volume may be described as psychophysiological. It consists of articles which examine the possible physiological mechanisms of individual psychological features of behavior. Many are devoted to either experimental or theoretical analysis of the neurophysiological bases of the personality dimension of extraversion-introversion.

An anthology of erotic short stories, poems, musings and

artwork by women and a non-binary gender person.

This is the first book to provide an overview of current research using cutting-edge genetic and neuroimaging methods in the study of personality. Integrating compelling lines of inquiry that until now have largely remained disparate, the volume brings together leading investigators from personality psychology; clinical psychology and psychiatry; cognitive, affective, and behavioral neuroscience; and comparative psychology. Coverage includes the

structure of personality and its mapping onto biology, genetic markers for individual differences and vulnerability towards psychopathology, sex differences and age-related processes, and functional neuroimaging approaches.

Aspen Plus is on of the most
popular process simulation
software programs used
industrially and
academically. Though the
software is available at
many corporations and
universities, there are no
textbooks which are
dedicated to teaching the

step-by-step use of the software. This book is designed to fill that need. The structure of the book is unique in that it emulates a lecture /workshop classroom environment. Each chapter starts with the equivalent of a classroom lecture followed by workshops which provide experience in the chapter's subject matter. The enclosed CD contains solutions, both in Aspen Plus and text formats, to examples imbedded in the text as well as to all the workshops. There are also notes at the end of each chapter designed to aid readers that have difficulty with the workshops. Note: CD-

A prophetic voice calls the Church's prophetic stream to accountability—an eye-opening and powerful directive for change if renewal is to happen.

This book covers high order finite difference methods for time dependent PDE. It gives an overview of the basic theory and construction principles by using model examples. The book also contains a general presentation of the techniques and results for
