An eye-opening view of the unprecedented global spread of El Sistema—intensive music education that disrupts the cycles of poverty. In some of the bleakest corners of the world, an unprecedented movement is taking root. From the favelas of Brazil to the Maori villages in New Zealand, from occupied Palestine to South Central Los Angeles, musicians with strong social consciences are founding intensive orchestra programs for children in need. In this captivating and inspiring account, authors Tricia Tunstall and Eric Booth tell the remarkable story of the international El Sistema movement. A program that started over four decades ago with a handful of music students in a parking garage in Caracas, El Sistema has evolved into one of classical music's most vibrant new expressions and one of the world's most promising social initiatives. Now with more than 700,000 students in Venezuela, El Sistema's central message—that music can be a powerful tool for social change—has burst borders to grow in 64 countries (and that number increases steadily) across the globe. To discover what makes this movement successful across the radically different cultures that have embraced it, the authors traveled to 25 countries, where they discovered programs thriving even in communities ravaged by poverty, violence, or political unrest. At the heart of each program is a deep commitment to inclusivity. There are no auditions or entry costs, so El Sistema's doors are open to any child who wants to learn music—or simply needs a place to belong. While intensive music-making may seem an unlikely solution to intractable poverty,

Urban transport systems worldwide are faced by a multitude of challenges. Among the most visible of these are the traffic gridlocks experienced on city roads and highways all over the world. The prescribed solution to transport problems in most cities has thus been to build more infrastructures for cars, with a limited number of cities improving public transport systems in a sustainable manner. However, a number of challenges faced by urban transport systems – such as greenhouse gas emissions, noise and air pollution and road traffic accidents – do not necessarily get solved by the construction of new infrastructure. Planning and Design for Sustainable Urban Mobility argues that the development of sustainable urban transport systems requires a conceptual leap. The purpose of ‘ transportation ’ and ‘ mobility ’ is to gain access to destinations, activities, services and goods. Thus, access is the ultimate objective of transportation. As a result, urban planning and design should focus on how to bring people and places together, by creating cities that focus on accessibility, rather than simply increasing the length of urban transport infrastructure or increasing the movement of people or goods. Urban form and the functionality of the city are therefore a major focus of this report, which highlights the importance of integrated land-use and transport planning. This new report of the United Nations Human Settlements Programme (UN-Habitat), the world ’ s leading authority on urban issues, provides some thought-provoking insights and policy recommendations on how to plan and design sustainable urban

Due to such factors as poor economic conditions, climate change, and conflict, food security remains an issue around the world and especially in developing nations. Rapid changes in technology over the last decade has brought a renewed focus on how information and communication technologies (ICTs) and application systems are deployed to improve rural competitiveness. Unfortunately, agricultural stakeholders in developing countries, particularly in Africa, have not been able to reap comparable benefits from adopting agricultural

information systems as compared to their counterparts in the developed economies. Understanding the challenges that hinder the effective adoption of agricultural information systems and identifying opportunities or innovations is imperative to improve the agricultural sectors and overcome the problems in these developing economies. Opportunities and Strategic Use of Agribusiness Information Systems is an essential reference book that examines the key challenges that hinder the effective adoption of agricultural information systems. Moreover, it identifies and evaluates opportunities for the strategic deployment of ICTs and information systems to drive agricultural development for the benefit of agricultural sector stakeholders in emerging countries. While highlighting such topics as agricultural entrepreneurship, food value chain, and innovation systems, it is intended to provide sound and relevant frameworks and tools that will aid agricultural industry practitioners, smallholder farmers, and managers of agricultural extension systems looking to make more effective and responsible decisions when selecting, planning, deploying, and managing agribusiness information systems. It is additionally targeted for agricultural funding organizations, government policymakers, academicians, researchers, and students concerned with exploiting the potential of a variety of ICTs and information systems in the quest to achieve food security and poverty reduction in emerging economies.
