Overwhelmed by inductance calculations, the author brings together an invaluable collection of formulas and tables. For virtually every type of inductor, Dr. Grover provides a single simple formula, together with tables from which essential numerical factors may be interpolated. Starting with a survey of general

principles, the text explains circuits with straight filaments; parallel elements of equal length; mutual inductance of unequal parallel filaments and filaments inclined at an angle to each other; and inductance of single-layer coils on rectangular winding forms. Additional topics include the mutual

inductance of coaxial circular filaments and of coaxial circular coils; self-inductance of circular coils of rectangular cross section; mutual inductance of solenoid and a coaxial circular filament and coaxial single-layer coils; single-layer coils on cylindrical winding forms; and special types of single-

In the past few years,
interest in plug-in
electric vehicles (PEVs)
has grown. Advances in
battery and other
technologies, new
federal standards for
carbon-dioxide
emissions and fuel
economy, state zero-

emission-vehicle requirements, and the current administration's goal of putting millions of alternative-fuel vehicles on the road have all highlighted PEVs as a transportation alternative. Consumers are also beginning to recognize the advantages of PEVs over conventional vehicles, such as lower

Access Free Gm Wireless

operating costs, smoother operation, and better acceleration; the ability to fuel up at home; and zero tailpipe emissions when the vehicle operates solely on its battery. There are, however, barriers to PEV deployment, including the vehicle cost, the short all-electric driving range, the long battery

charging time,
uncertainties about
battery life, the few
choices of vehicle
models, and the need for
a charging infrastructure
to support PEVs. What
should industry do to
improve the
performance of PEVs
and make them more
attractive to consumers?

barriers to the

vehicles and
recommends ways to
mitigate these barriers.

This report examines the

such as cost,
performance, range,

and assesses how these
factors might create
