Built with twin, underwing engines, tricycle landing gear and shoulder-mounted wings, the Grumman F7F Tigercat was an unusual looking, all-metal fighter. It was also one of the highest-performance piston-engined fighters of all time. Originally designed as a carrier-based aircraft, the F7F failed its initial trials, and ended up flying primarily as a land-based attack aircraft for the Marines. Equipped with radar and a second seat for an operator, the Tigercat also flew as a night-fighter and reconnaissance platform. Although it was introduced in 1944, the Tigercat never saw action in WWII, and had a limited role in Korea. The F7F found a new role in non-military use, flying as a fire-fighting aircraft and camera ship for Hollywood in the 1970s. Originally printed by the U.S. Navy, this F7F Flight Operating Manual taught pilots everything they needed to know before entering the cockpit. This facsimile has been reformatted. Care has been taken to preserve the integrity of the text.

An invaluable ready resource on the military balance in a region that has become critical to world peace, by the expert on the topic.

"Just over a week ago the New York Times revealed that in 1995 Vice President Al Gore and then-Russian Premier Victor Chernomyrdin signed a secret agreement that appears to violate ... important principles. In this agreement the United States reportedly dropped its objections to Russia's transfer of sophisticated weapons to Iran and promised not to impose sanctions mandated by U.S. law as a response to those transfers. In return, Russia committed not to sell Iran more weapons after December 31, 1999. As we now know, Russia continues to provide Iran not only powerful conventional weaponry, but also provides technology and know-how that benefits Iran's missile and nuclear weapons programs"--Page 1.
