And Incomplete

Dominance

1. Incomplete

dominance governs the pigment gene of a flower. A mating between heterozygotes yields the following phenotypic ratio: 15 red flowers, 32 pink flowers and 14 white flowers.

Quiz & Worksheet -

Codominance and

Page 10/68

Incomplete Dominance

... And Incomplete

Incomplete dominance is when the phenotypes of the two parents blend together to create a new phenotype for their offspring. An example is a white flower and a red flower producing pink flowers.

Codominance is when the two parent phenotypes are

Read Free

Practice

expressed together in
the offspring.

And Incomplete

Dominance

*Incomplete Dominance
vs Codominance:*

What's the Difference?

Closely related to
incomplete dominance
is codominance, in
which both alleles are
simultaneously
expressed in the
heterozygote. We can
see an example of

Read Free Practice

codominance in the MN blood groups of humans (less famous than the ABO blood groups, but still important!). A person's MN blood type is determined by his or her alleles of a certain gene.

(video) | Khan Academy*
Incomplete Dominance:

Page 20/68

Read Free Practice

Definition, Examples,
and Practice Problems.
You may already know
that in the study of
genetics, dominance
refers to the relationship
between alleles, which
are two forms of a gene.
In a dominant
relationship between
alleles, one allele
“masks” the other and
influences a specific
trait. When the

Read Free

Practice

phenotype (the observable characteristic) of the heterozygote is identical to the dominant homozygote, the relationship is considered to be “complete dominance.”.

*Incomplete Dominance:
