Covers two species *Peneaus monodon* and *Peneaus vannamei*. It is organized into three main parts (Design, Operation, and Training). The design part focuses on two hatcheries and gives detailed plans of their construction as well as other options. The operation portion of the manual details the procedures for most efficient operation of a specific hatchery. This manual consists of compiled, presently known information important for training new personnel. Contains enough detail to provide the newcomer with knowledge to run a hatchery and provides details to assist the experienced hatchery manager. Illustrated.

Discover BIM: A better way to build better buildings Building Information Modeling (BIM) offers a novel approach to design, construction, and facility management in which a digital representation of the building product and process is used to facilitate the exchange and interoperability of information in digital format. BIM is beginning to change the way buildings look, the way they function, and the ways in which they are designed and built. The BIM Handbook, Third Edition provides an in-depth understanding of BIM technologies, the business and organizational issues associated with its implementation, and the profound advantages that effective use of BIM can provide to all members of a project team. Updates to this edition include: Information on the ways in which professionals should use BIM to gain maximum value New topics such as collaborative working, national and major construction clients, BIM standards and guides A discussion on how various professional roles have expanded through the widespread use and the new avenues of BIM practices and services A wealth of new case studies that clearly illustrate exactly how BIM is applied in a wide variety of conditions Painting a colorful and thorough picture of the state of the art in building information modeling, the BIM Handbook, Third Edition guides readers to successful implementations, helping them to avoid needless frustration and costs and take full advantage of this paradigm-shifting approach to construct better buildings that consume fewer materials and require less time, labor, and capital resources.

Risk is a future phenomenon. As part of our eternal quest to control some small component of our future, it is the focus of many business discussions, thus making it an essential part of decision making. The challenge comes in creating a degree of consistency in managing risk and the risk process. In his fourth edition of Risk Management: Concepts and Guidance, Carl L. Pritchard, PMP, again addresses this challenge expertly. This comprehensive edition views risk in light of current information, while remaining grounded in the history of risk practice. Updated to reflect the Project Management Institute, Inc.'s PMBOK® Guide, Fourth Edition, this edition emphasizes greater clarity on risk practice from a pragmatic perspective. Risk Management uses a holistic approach, examining risk as a blend of environmental, programmatic, and situational concerns. It is an encyclopedia of risk management tools, practices, and protocols. The book's 35 tool-packed chapters cover the latest perspectives, focusing on a systematic approach to risk management. The author highlights specific techniques to enhance organizational risk identification, assessment, and management, all within the project and program environments. The book is a must-have project management tool for gaining a higher-level perspective on risk management and enhancing organizational risk identification, assessment, and management.

Managing Ocean Environments in a Changing Climate summarizes the current state of several threats to the global oceans. What distinguishes this book most from previous works is that this book begins with a holistic, global-scale focus for the first several chapters and then provides an example of how this approach can be applied on a regional scale, for the Pacific region. Previous works usually have compiled local studies, which are essentially impossible to properly integrate to the global scale. The editors have engaged leading scientists in a number of areas, such as fisheries and marine ecosystems, ocean chemistry, marine biogeochemical cycling, oceans and climate change, and economics, to examine the threats to the oceans both individually and collectively, provide gross estimates of the economic and societal impacts of these threats, and deliver high-level recommendations. Nominated for a Katerina Award in 2012 in the Economy category State of the science reviews by known marine experts provide a concise, readable presentation written at a level for managers and students Links environmental and economic aspects of ocean threats and provides an economic analysis of action versus inaction Provides recommendations for stakeholders to help stimulate the development of policies that would help move toward sustainable use of marine resources and services

Comparative Approaches to Informal Housing Around the Globe brings together historians, anthropologists, political scientists, sociologists, urban planners and political activists to break new ground in the globalisation of knowledge about informal housing. Providing both methodological reflections and practical examples, they compare informal settlements, unauthorised occupation of flats, illegal housing construction and political squatting in different regions of the world. Subjects covered include squatter settlements in Kyrgyzstan and Kazakhstan, squatting activism in Brazil and Spain, right-wing squatting in Germany, planning laws and informality across countries in the Global North, and squatting in post-Second World War UK and Australia.

Providing a thorough review and synthesis of work on communication skills and skill enhancement, this Handbook serves as a comprehensive and contemporary survey of theory and research on social interaction skills. Editors John O. Greene and Brant R. Burlison have brought together preeminent researchers and writers to contribute to this volume, establishing a foundation on which future study and research will build. The handbook chapters are organized into five major units: general theoretical and methodological issues (models of skill acquisition, methods of skill assessment); fundamental interaction skills (both transactional and transcontextual); function-focused skills (informing, persuading, supporting); skills used in management of diverse personal relationships (friendships, romances, marriages); and skills used in varied venues of public and professional life (managing leading, teaching). Distinctive features of this handbook include: * broad, comprehensive treatment of work on social interaction skills and skill acquisition; * up-to-date reviews of research in each area; and * emphasis on empirically supported strategies for developing and enhancing specific skills. Researchers in communication studies, psychology, family studies, business management, and related areas will find this volume a comprehensive, authoritative source on communications skills and their enhancement, and it will be essential reading for scholars and students across the spectrum of disciplines studying social interaction.

Conservation Biology for All provides cutting-edge but basic conservation science to a global readership. A series of authoritative chapters have been written by the top names in conservation biology with the principal aim of disseminating cutting-edge conservation knowledge as widely as possible. Important topics such as balancing conservation and human needs, climate change, conservation planning, designing and analyzing conservation research, ecosystem services, endangered species management, extinctions, fire, habitat loss, and invasive species are covered. Numerous textboxes describing additional relevant material or case studies are also included. The global biodiversity crisis is now unstoppable; what can be saved in the developing world will require an educated constituency in both the developing and developed world. Habitat loss is particularly acute in developing countries, which is of special concern because it tends to be these locations where the greatest species diversity and richest centres of endemism are to be found. Sadly, developing world conservation scientists have found it difficult to access an authoritative textbook, which is particularly ironic since it is these countries where the potential benefits of knowledge application are greatest. There is now an urgent need to educate the next generation of scientists in developing countries, so that they are in a better position to protect their natural resources.

"The BIM Handbook is an extensively researched and meticulously written book, showing evidence of years of work rather than something that has been quickly put together in the course of a few months. It brings together most of the current information about BIM, its history, as well as its potential future in one convenient place, and can serve as a handy reference book on BIM for anyone who is involved in the design, construction, and operation of buildings and needs to know about the technologies that support it. The need for such a book is indisputable, and it is terrific that Chuck Eastman and his team were able to step up to the plate and make it happen. Thanks to their efforts, anyone in the AEC industry looking for a deeper understanding of BIM now knows exactly where to look for it." —AECbytes book review, August 28, 2008 (www.aecbytes.com/review/2008/BIMHandbook.html) DISCOVER BIM: A BETTER WAY TO BUILD BETTER BUILDINGS Building Information Modeling (BIM) offers a novel approach to design, construction, and facility management in which a digital representation of the building process is used to facilitate the exchange and interoperability of information in digital format. This book addresses environmental and climate change induced migration from the vantage point of migration studies, offering a broad spectrum of approaches for considering the environment/climate/migration nexus. Research on the subject is still frequently narrowed down to climate change vulnerability and the environmental push factor. The book establishes the interconnections between societal and environmental vulnerability, and migration and capability, allowing appreciation of migration in the frame of climate as a case of spatial and social mobility, that is, as a strategy of persons and groups to deal with a grossly unequal distribution of life chances across the world. In their introduction, the editors fan out the current debate and state the need to transcend predominantly policy-oriented approaches to migration. The first section of the volume focuses on "Methodologies and Methods" and presents very distinct approaches to think climate induced migration. Subsequent chapters explore the sensitivity of existing migration flows to climate change in Ghana and Bangladesh, the complex relationship between migration, demographic change and coping capacities in Canada, methodological challenges of a household survey on the significance of migration and remittances for adaptation in the Hindu Kush region and an econometric study of the aftermath of the 1998 floods in Bangladesh. The second part, "Areas of Concern: Politics and Human Rights", deepens the analysis of discourses as well as of the implications of proposed and implemented policies. Contributors discuss such topics as environmental migration as a multi-causal problem, climate migration as a consequence in an alarmist discourse and climate migration as a solution. A study of an integrated relocation program in Papua New Guinea is followed by chapters on the promise and the flaws of planned relocation policy, global policy on protection of environmental migrants including both internally displaced peoples and those who cross international borders. A concluding chapter places human agency at centre stage and explores the interplay between human rights, capability and migration.

This book describes the approach to anesthetic and perioperative management in different categories of high-risk patient scheduled to undergo elective noncardiac surgery. Individual sections focus on patients with conditions entailing cardiac and hemodynamic risks, respiratory risks, renal and metabolic risks, neurological risks, and other forms of risk. For each condition, up-to-date guidance is provided on risk evaluation, risk stratification, and intraoperative and postoperative anesthetic management. This is the first time that such different clinical situations have been gathered together in a single textbook of anesthesiology. All of the authors are international experts with extensive clinical experience. The aim is to provide trainee anesthesiologists with clear guidance that will prove invaluable when managing a wide range of patients with serious illnesses or conditions that pose a significant anesthetic risk. The book will also serve as a valuable reference for more experienced anesthesiologists and intensivists.
