Race Differences in Intelligence Author Richard Lynn
Publisher Washington Summit Publishers Publication date March 2006
Pages 338 ISBN 1-59368-021-X Race Differences in Intelligence: An Evolutionary Analysis is a 2006 book by controversial race and intelligence writer Richard Lynn reviewing selected literature on IQ testing and arguing for in part genetic racial differences and with a discussion on the causes and consequences. Reviews of the book fault the selection of data used, the methodology, an

Race Differences in Intelligence (book) - Wikipedia

Claims of differences in intelligence between races have been used to justify colonialism, slavery, racism, social Darwinism, and racial eugenics. Racial thinkers such as Arthur de Gobineau relied crucially on the assumption that black people were innately inferior to white people in developing their ideologies of white supremacy .

class White homes.”

Race differences in intelligence: how research changed my ...

In the United States, what little discussion there is about racial differences revolves around intelligence. Study after study has consistently shown that the average black IQ test score is 15 to 18 points lower than the white average. It appears that the gap starts at about 15 points in childhood and widens to as much as 20 points in adulthood.

A scientific response to the best-selling *The Bell Curve* which set

Read Online Race Differences In Intelligence

off a hailstorm of controversy upon its publication in 1994. Much of the public reaction to the book was polemic and failed to analyse the details of the science and validity of the statistical arguments underlying the books conclusion. Here, at last, social scientists and statisticians reply to The Bell Curve and its conclusions about IQ, genetics and social outcomes.

In recent years, reported racial disparities in IQ scores have been the subject of raging debates in the behavioral and social sciences and education. What can be made of these test results in the context of current scientific knowledge about human evolution and cognition? Unfortunately, discussion of these issues has tended to generate more heat than light. Now, the distinguished authors of this book offer powerful new illumination. Representing a range of disciplines--psychology, anthropology, biology, economics, history, philosophy, sociology, and statistics--the authors review the concept of race and then the concept of intelligence. Presenting a wide range of findings, they put the experience of the United States--so frequently the only focus of attention--in global perspective. They also show that the human species has no "races" in the biological sense (though cultures have a variety of folk concepts of "race"), that there is no single form of intelligence, and that formal

education helps individuals to develop a variety of cognitive abilities. Race and Intelligence offers the most comprehensive and definitive response thus far to claims of innate differences in intelligence among races.

The test score gap between blacks and whites--on vocabulary, reading, and math tests, as well as on tests that claim to measure scholastic aptitude and intelligence--is large enough to have far-reaching social and economic consequences. In their introduction to this book, Christopher Jencks and Meredith Phillips argue that eliminating the disparity would dramatically reduce economic and educational inequality between blacks and whites. Indeed, they think that closing the gap would do more to promote racial equality than any other strategy now under serious discussion. The book offers a comprehensive look at the factors that contribute to the test score gap and discusses options for substantially reducing it. Although significant attempts have been made over the past three decades to shrink the test score gap, including increased funding for predominantly black schools, desegregation of southern schools, and programs to alleviate poverty, the median black American still scores below 75 percent of American whites on most standardized tests. The book brings together recent evidence on some of the most

Read Online Race Differences In Intelligence

controversial and puzzling aspects of the test score debate, including the role of test bias, heredity, and family background. It also looks at how and why the gap has changed over the past generation, reviews the educational, psychological, and cultural explanations for the gap, and analyzes its educational and economic consequences. The authors demonstrate that traditional explanations account for only a small part of the black-white test score gap. They argue that this is partly because traditional explanations have put too much emphasis on racial disparities in economic resources, both in homes and in schools, and on demographic factors like family structure. They say that successful theories will put more emphasis on psychological and cultural factors, such as the way black and white parents teach their children to deal with things they do not know or understand, and the way black and white children respond to the same classroom experiences. Finally, they call for large-scale experiments to determine the effects of schools' racial mix, class size, ability grouping, and other policies. In addition to the editors, the contributors include Claude Steele, Ronald Ferguson, William G. Bowen, Philip Cook, and William Julius Wilson.

“[Nisbett] weighs in forcefully and articulately . . . [using] a thoroughly appealing style to engage . . . throughout.”—Publishers

Weekly Who are smarter, Asians or Westerners? Are there genetic explanations for group differences in test scores? From the damning research of *The Bell Curve* to the more recent controversy surrounding geneticist James Watson's statements, one factor has been consistently left out of the equation: culture. In the tradition of Stephen Jay Gould's *The Mismeasure of Man*, world-class social psychologist Richard E. Nisbett takes on the idea of intelligence as biologically determined and impervious to culture with vast implications for the role of education as it relates to social and economic development. *Intelligence and How to Get It* asserts that intellect is not primarily genetic but is principally determined by societal influences.

A leading neuroscientist explains why your personal traits are more innate than you think What makes you the way you are—and what makes each of us different from everyone else? In *Innate*, leading neuroscientist and popular science blogger Kevin Mitchell traces human diversity and individual differences to their deepest level: in the wiring of our brains. Deftly guiding us through important new research, including his own groundbreaking work, he explains how variations in the way our brains develop before birth strongly influence our psychology and behavior throughout our lives, shaping
