Over one million unborn children are intentionally aborted every year in North America. Voiceless and helpless, their blood cries out. Will those of us who serve as pastors and preachers respond from our pulpits? Silence is not an option. We cannot keep quiet while thousands of our neighbors, made in the image of God, are being led to the slaughter every day. But neither should we condemn and vilify those who are complicit in their deaths. A truly pro-life pulpit ministry opposes the injustice of abortion with truth, courage and understanding. Tears mingled with hope, overflowing with grace. After all, the Christian faith is rooted in the good news of a Messiah who was once an embryo. Nine months before he was born, Jesus was conceived by the Holy Spirit, and for the next forty weeks he lived and grew in the womb of an unwed teenaged mother. He is at the heart of our preaching, and this book will show you how to confront the sin of abortion by proclaiming the God who became abortable in order to save sinners.

When Dot's mother begins to plant a tree, Bob the dog decides to help.

Tells how clutches & transmissions work - gear, friction, & hydrostatic. Gives basics of service & repair of major types of drives, transmission, transaxles, & clutches used in compact equipment. Includes troubleshooting guides. It provides the reader with a list of skills & knowledge that should be learned with each chapter. CONTENTS: Basic principles, clutches, mechanical transmissions, hydrostatic transmissions, belt & chain drives, differentials, final drives, power take-offs, service & maintenance & troubleshooting.

In 1947 Vaino J. Holopainen (Waino) and Roy E. Handy Jr. of the small town of Hubbardston, Massachusetts developed the world's first backhoe. This revolutionary invention that could dig and load by swinging side to side, was also the world's first all hydraulically actuated and controlled machine for digging. Vaino and Roy then formed Wain-Roy Corporation. Their grassroots contribution to the earth moving industry lead to the development of twenty-six major backhoe related break-through designs, including the tractor loader backhoe, which formed the worldwide multi-billion-dollar industry that we know today.The amazing story of Wain-Roy and the invention of the backhoe is one of inspiration, struggle, genius, success, theft and failure. Credit for the backhoe is often given to other larger outfits who no-doubt fueled the rise of its widespread use. Few people alive still remember the greatest triumphs and failures of the true inventors and innovators of first backhoe and the first all-hydraulic digger. Authors Lee Horton and Dave Willens, two engineers from Central Massachusetts, wanted to capture this fascinating history before it was lost to time.

This is an illustrated guide to trapping, identifying and quantifying airborne biological particles such as fungus, plant spores and pollen. Including a comprehensive review of what is in the air and detailing the historical development of theories leading to modern aerobiology, the book explains the fundamental processes behind airborne dispersal and techniques used to sample, identify and quantify biological particles. Includes photographs and 9 colour reproductions of paintings of airborne particles.

One hundred years ago electric cars were the most popular automobiles in the world. In the late nineteenth century and at the start of the twentieth century, they outsold every other type of car. And yet, within a couple of decades of the start of the twentieth century, the electric car had vanished. Thousands of battery-powered cars disappeared from the streets, replaced by the internal combustion engine, and their place in the history of the automobile was quietly erased. A century later, electric cars are making a comeback. Fears over pollution and global warming have forced manufacturers to reconsider the electric concept. A History of Electric Cars presents for the first time the full story of electric cars and their hybrid cousins. It examines how and why electric cars failed the first time - and why today's car manufactureres must learn the lessons of the past if they are to avoid repeating previous mistakes all over again. The book examines in detail: Early vehicles such as the Lohner-Porsche petrol-electric hybrid of 1901; Key figures in the history of the electric car development such as Henry Ford; Sir Clive Sinclair's plans to build a number of electric vehicles, designed to sit alongside the Sinclair C5; The return of the electric technology to vehicles as diverse as the NASA Lunar Rover, commuting vehicles and supercars; Future developments in electric cars. For the first time the full story of electric cars and their hybrids are examined.The hidden past of the electric automobile is uncovered and its future developments are discussed. Superbly illustrated with 300 colour photographs, many of which are rare and original sketch designs. Nigel Burton has written and lectured on cars and automotive history for more than twenty years.

In How to Super Tune and Modify Holley Carburetors, best selling author Vizard explains the science, the function, and most importantly, the tuning expertise required to get your Holley carburetor to perform its best for your performance application.
