Fundamentals of Derivatives Markets is a succinct yet comprehensive adaptation of the author's successful text, Derivatives Markets. Streamlined for a broad range of undergraduate students, the approachable writing style and accessible balance of theory and applications introduces essential derivatives principles. By exploring various methods for valuing derivatives and by discussing risk management strategies in real-world context, Fundamentals of Derivatives Markets develops students' financial literacy for today's corporate environment."

Geomembranes are flexible polymeric sheets which are used as relatively impermeable liners to contain liquid and vapour. With uses ranging from canal liners to hazard waste landfills, they are used extensively in a range of industries such as water conservation, mining, construction and waste management. A Guide to Polymeric Geomembranes: A Practical Approach offers an informed overview of the developments in this field and includes: Detailed discussion of the major geomembrane types Manufacturing methods Key performance properties Industrial applications Testing and chemical resistance of geomembranes Failure analysis methodology Written by a polymer research specialist with more than fifteen years experience in industry, this practical handbook covers the manufacture, use, installation, durability, lifespan and performance of geomembranes. It covers all the information required to enable the reader to select the most suitable geomembrane material for the job. This book is a useful reference for engineers and professionals in industry, environmental consultants, polymer and materials scientists, and government agencies and policy makers. It is of particular interest to those designing, commissioning and operating waste management sites, landfills, mine leachate ponds and water containment facilities.

Java Programming: A Comprehensive Introduction is designed for an introductory programming course using Java. This text takes a logical approach to the presentation of core topics, moving step-by-step from the basics to more advanced material, with objects being introduced at the appropriate time. The book is divided into three parts: Part One covers the elements of the Java language and the fundamentals of programming. An introduction to object-oriented design is also included. Part Two introduces GUI (Graphical User Interface) programming using Swing. Part Three explores key aspects of Java's API (Application Programming Interface) library, including the Collections Framework and the concurrency API. Herb Schildt has written many successful programming books in Java, C++, C, and C#. His books have sold more than three million copies. Dale Skrien is a professor at Colby College with degrees from the University of Illinois-Champaign, the University of Washington, and St. Olaf College. He's also authored two books and is very active in SIGCSE.

This introduction to Java programming features a business focus. It discusses what it means to be object oriented, how to structure classes, and how to write methods using Java's structured programming elements. After outlining the elements of a complete Java program, the book moves on to advanced topics such as writing event-driven GUI programs, preparing applets for the Web, one- and two-dimensional arrays, animation, and more. Files from the book will be available on the Web.

A brief introduction to the artist's life prefaces a facsimile volume of the sketchbook drawn between 1892 and 1897

The industry-standard guide to networked audiovisual systems Published with InfoComm International, Networked AV Systems discusses the essential information AV and IT professionals need to know when working with network-driven equipment and processes. Each chapter features diagrams, photos, notes, chapter reviews, and end-of-chapter questions with in-depth explanations. In accordance with InfoComm's performance standards for the AV industry as they relate to networking, this book serves as both an on-the-job reference and a study tool for the Certified Technology Specialist (CTS) exams. Networked AV Systems covers: Network classifications, topologies, architectures, and standards Layers of a network Bandwidth, encoding, and transport Network building blocks Designing a network for AV systems Ethernet and AVB Network addressing Subnetting: networking AV devices together Protocols, ports, and documenting AV devices Audio and video streaming Digital signage Conferencing Secure remote management and monitoring Service level agreements Network security Troubleshooting networked systems

Construction equipment and machine parts are going missing all over Stermont! Then an entire playground disappears! Could a monster be to blame? The Super Secret Monster Patrol will need to stop this crafty monster FAST -- before the whole town falls
