Interest in studying the phenomena of convective heat

and mass transfer between an ambient fluid and a body which is immersed in it stems both from fundamental considerations, such as the development of better insights into the nature of the underlying physical

processes which take place,  
and from practical  
considerations, such as the  
fact that these idealised  
configurations serve as a  
launching pad for modelling  
the analogous transfer  
processes in more realistic

physical systems. Such idealised geometries also provide a test ground for checking the validity of theoretical analyses. Consequently, an immense research effort has been expended in exploring and

understanding the convective heat and mass transfer processes between a fluid and submerged objects of various shapes. Among several geometries which have received considerable attention are plates,

edition has been updated to
