Insurance and risk management make up an immense, complex global industry, one which is constantly changing. Competition continues to heat up, as mergers and acquisitions create financial services mega-firms. As the insurance industry grows more global, underwriters see huge potential in China, the world's fastest-growing business market. Meanwhile, technology is making back-office tasks easier and more efficient, while direct selling and e-commerce are changing the shape of the insurance industry. This carefully-researched book (which includes a database of leading companies on CD-ROM) is a complete insurance market research and business intelligence tool-- everything you need to know about the business of insurance and risk management. This book, drawn from the award-winning online Oxford Dictionary of National Biography, tells the story of our recent past through the lives of those who shaped national life.

This book provides a study of the rise of private sector providers in the welfare state. It compares for-profit firms as providers of hospital services and pensions and investigates the new private actors in social policy provision, whether they become political actors, and the extent of their power in welfare state politics. Focusing on Germany and the UK, the author's analysis includes, amongst others, the surprising role of private sector firms in the National Health Service and the halting integration of financial sector companies in the German pension system. The book develops a novel measure of power resources with which to capture two dimensions of provider power: instrumental and structural resources. This important book sheds new light on the increasingly dominant role of markets in public policy provision by focusing on the supply side of these markets. Readers will learn about the drivers and contents of social policy reform, the interaction between business and politics and the politics of privatization. It will appeal to scholars and practitioners with an interest in public policy, comparative politics, welfare state reform and privatization.

This book is written for business leaders and those that govern organisations. All high performing organisations excel in achieving 7 organisational outcomes: Accountability, Awareness, Adaptability, Agility, Alignment, Action and Achievement. The enterprise governance framework must deliver on these 7 As through penetrating and integrating three organisational governance layers to drive high performance. These include: corporate governance, strategic governance and operational governance. The book unifies traditional corporate governance, leadership, and strategic management processes, whilst seeking to understand what actually happens on the ground to keep the organisation working and delivering ongoing value to its stakeholders. It synthesises these separate streams into a unified enterprise governance framework, posing some challenging questions whilst providing clear insight into how you implement enterprise governance: something that helps deliver on the 7 As and ultimately high performance.

Diebold and Yilmaz (2015) recently introduced variance decomposition networks as tools for quantifying and ranking the systemic risk of individual firms. The nature of these networks and their implied rankings depend on the choice decomposition method. The standard choice is the order invariant generalized forecast error variance decomposition of Pesaran and Shin (1998). The shares of the forecast error variation, however, do not add to unity, making difficult to compare risk ratings and risks contributions at two different points in time. As a solution, this paper suggests using the Lanne-Nyberg (2016) decomposition, which shares the order invariance property. To illustrate the differences between both decomposition methods, I analyzed the global financial system during 2001 – 2016. The analysis shows that different decomposition methods yield substantially different systemic risk and vulnerability rankings. This suggests caution is warranted when using rankings and risk contributions for guiding financial regulation and economic policy.
