Twenty-five years ago, after teaching hundreds of art classes to thousands of students, I discovered a secret about drawing. Every shape in the world - from penguins to space ships - can be drawn with 6 elemental lines. I call my method the ARTABET, as it really is a basic language of art that children learn to master. The ARTABET shows that once you learn the 6 elemental lines of drawing, the possibilities are endless. The ARTABET is designed for home use and is perfect for elementary school teachers in the classroom. Everything you will need to know to set a firm foundation for your child's or student's drawing is available in the ARTABET / First Steps In Drawing. Great for all ages and fully supported at our Free resource website, ARTABET.COM

Shortlisted for the 2013 Nursery World Awards! Margaret Carr's seminal work on Learning Stories was first published by SAGE in 2001, and this widely acclaimed approach to assessment has since gained a huge international following. In this new full-colour book, the authors outline the philosophy behind Learning Stories and refer to the latest findings from the research projects they have led with teachers on learning dispositions and learning power, to argue that Learning Stories can construct learner identities in early childhood settings and schools. By making the connection between sociocultural approaches to pedagogy and assessment, and narrative inquiry, this book contextualizes Learning Stories as a philosophical approach to education, learning and pedagogy. Chapters explore how Learning Stories: - help make connections with families - support the inclusion of children and family voices - tell us stories about babies - allow children to dictate their own stories - can be used to revisit children's learning journeys - can contribute to teaching and learning wisdom This ground-breaking book expands on the concept of Learning Stories and includes examples from practice in both New Zealand and the UK. It outlines the philosophy behind this pedagogical tool for documenting how learning identities are constructed and shows, through research evidence, why the early years is such a critical time in the formation of learning dispositions. Margaret Carr is a Professor of Education at the University of Waikato, New Zealand. Wendy Lee is Director of the Educational Leadership Project, New Zealand.

The Creative Curriculum comes alive! This videotape-winner of the 1989 Silver Apple Award at the National Educational Film and Video Festival-demonstrates how teachers set the stage for learning by creating a dynamic well-organized environment. It shows children involved in seven of the interest areas in the The Creative Curriculum and explains how they learn in each area. Everyone conducts in-service training workshops for staff and parents or who teaches early childhood education courses will find the video an indispensable tool for explaining appropriate practice.

Mandarin Chinese has become indispensable for crosslinguistic comparison and syntactic theorizing. It is nevertheless still difficult to obtain comprehensive answers to research questions, because Chinese is often

presented as an "exotic" language defying the analytical tools standardly used for other languages. This book sets out to demystify Chinese. It places controversial issues in the context of current syntactic theories and offers precise analyses based on a large array of representative data. Although the focus is on Modern Mandarin, earlier stages of Chinese are occasionally referred to in order to highlight striking continuities in its history. VO order is one such constant factor, thus invalidating the idea that Chinese went through a major word order change from OV to VO and back to OV. Another claim often made for Chinese as an isolating language, viz. the existence of an impoverished inventory of parts of speech, is likewise refuted. Other long debated issues addressed here include the relevance of the dichotomy topic vs subject prominence and the role of Chinese as a recurring exception to crosscategorical harmonies posited in typological studies.

As a distinctive syntactic structure in Mandarin Chinese, the Patient-Subject Construction (PSC) is one of the most interesting but least well-understood structures in the language. This book offers a comprehensive account of the history, structure, meaning and use of the PSC. Unlike previous descriptions which were framed in terms of pre-existing grammatical notions such as ' topicalization ', ' passivization ' and ' ergativization ', this book offers a fresh look at the PSC, in which its syntactic and semantic as well as its discourse functions are examined within the system of major construction-types of the language as a whole. The PSC, being low in transitivity, serves primarily the function of backgrounding in discourse. Typologically, the PSC bears a resemblance to middle constructions in Indo-European and other languages, raising interesting questions about ways to understand congruent and divergent syntactic structures across the world ' s languages. This book will be of interest to students of Chinese Linguistics as well as Language Typology.
