DIV God uses manpower. We need God's power. God works when we work. Millions of people all over the world have been introduced to Jesus through the ministry of Reinhard Bonnke. In Taking Action he describes how we too can be an extension of God's love to the world by partnering with the Holy Spirit. With a firsthand account of the mighty manifestations of God at work today, Bonnke takes a careful look at what Scripture teaches about the anointing and gifts of the Holy Spirit in general and then explains each of the specific gifts listed by the apostle Paul. Jesus lived, worked, and prayed in the power of the Holy Spirit. In the Gospel of John He says, "He who believes in Me, the works that I do he will do also." With this same anointing, we can live this way as well. /div

Recent cognitive neuroscientific research that crosses traditional conceptual boundaries among perceptual, cognitive, and motor functions in an effort to understand intentional acts. Traditionally, neurologists, neuroscientists, and psychologists have viewed brain functions as grossly divisible into three separable components, each responsible for either perceptual, cognitive, or motor systems. The artificial boundaries of this simplification have impeded progress in understanding many phenomena, particularly intentional actions, which involve complex interactions among the three systems.This book presents a diverse range of work on action by cognitive neuroscientists who are thinking across the traditional boundaries. The topics discussed include catching moving targets, the use of tools, the acquisition of new actions, feedforward and feedback mechanisms, the flexible sequencing of individual movements, the coordination of multiple limbs, and the control of actions compromised by disease. The book also presents recent work on relatively unexplored yet fundamental issues such as how the brain formulates intentions to act and how it expresses ideas through manual gestures.

Patient-centered, high-quality health care relies on the well-being, health, and safety of health care clinicians. However, alarmingly high rates of clinician burnout in the United States are detrimental to the quality of care being provided, harmful to individuals in the workforce, and costly. It is important to take a systemic approach to address burnout that focuses on the structure, organization, and culture of health care. Taking Action Against Clinician Burnout: A Systems Approach to Professional Well-Being builds upon two groundbreaking reports from the past twenty years, To Err Is Human: Building a Safer Health System and Crossing the Quality Chasm: A New Health System for the 21st Century, which both called attention to the issues around patient safety and quality of care. This report explores the extent, consequences, and contributing factors of clinician burnout and provides a framework for a systems approach to clinician burnout and professional well-being, a research agenda to advance clinician well-being, and recommendations for the field.
