Have you ever dreamed of being an astronaut? Wondered what it might be like to see the sun set sixteen times in one day? Open this book and be transported on an information-packed voyage aboard the space shuttle. True Kelley's kid-friendly diagrams and illustrations and Franklyn Branley's straightforward text reveal what astronauts eat, how they move, and what kinds of work they do in space.

Blast off into the sky and visit the International Space Station! A lively, rhythmical story and detailed illustrations take readers on a trip to the ISS, where astronauts sleep zipped up and walk in space. This great read-aloud includes information (verified by NASA staff) about the ISS. Fact-filled and fun, this story will send young minds soaring.

The International Space Station (ISS) is a great international, technological, and political achievement. It is the latest step in humankind's quest to explore and live in space. The research done on the ISS may advance our knowledge in various areas of science, enable us to improve life on this planet, and give us the experience and increased understanding that can eventually equip us to journey to other worlds. As a result of the Station's complexity, few understand its configuration, its design and component systems, or the complex operations required in its construction and operation. This book provides high-level insight into the ISS. The ISS is in orbit today, operating with a crew of three. Its assembly will continue through 2010. As the ISS grows, its capabilities will increase, thus requiring a larger crew. Currently, 16 countries are involved in this venture. The sophisticated procedures required in the Station's construction and operation are presented in Amazing 3D Graphics generated by NASA 104 pages of spectacularly detailed color graphics the Space Station as you've never seen it before!

Looks at the operations of the International Space Station from the perspective of the Houston flight control team, under the leadership of NASA's flight directors, who authored the book. The book provides insight into the vast amount of time and energy that these teams devote to the development, planning and integration of a mission before it is executed. The passion and attention to detail of the flight control team members, who are always ready to step up when things do not go well, is a hallmark of NASA human spaceflight operations. With tremendous support from the ISS program office and engineering community, the flight control team has made the International Space Station and the programs before it a success.

From September 2007 to June 2008 the Space Studies Board conducted an international public seminar series, with each monthly talk highlighting a different topic in space and Earth science. The principal lectures from the series are compiled in Forging the Future of Space Science. The topics of these events covered the full spectrum of space and Earth science research, from global climate change, to the cosmic origins of life, to the exploration of the Moon and Mars, to the scientific research required to support human spaceflight. The prevailing messages throughout the seminar series as demonstrated by the lectures in this book are how much we have accomplished over the past 50 years, how profound are our discoveries, how much contributions from the space program affect our daily lives, and yet how much remains to be done. The age of discovery in space and Earth science is just beginning. Opportunities abound that will forever alter our destiny.

An introduction to daily life aboard the International Space Station.

Join Chris Hadfield living on the International Space Station! This book examines the extraordinary life of one of the most popular astronauts, from his early life to the six months he spent living in space. Discover what the International Space Centre is used for, and how astronauts\u00a0like Hadfield can live there. Find out about the rigorous training that astronauts undergo and how they prepare for a journey into the unknown.

Max the dog is chosen to visit the international space station, where he becomes a valuable member of the crew.

In the fifth book in the CatStronauts graphic novel series, Pom Pom pushes her experiments to the limit on the International Space Station, while the cats at Mission Control take a much needed break. What could possibly go wrong? While the cats are away, the other cats will play! Flight Director Maisy is off on her first vacation in years, and World's Best Scientist is looking for a secret vacation of his own. But while the party picks up on Earth, the CatStronauts are trying to get all of their work on the International Space Station done in record time. So when disaster strikes in space, the CatStronauts will have to fix everything without their trusty support team at Mission Control. In this full-color graphic novel, debut author/illustrator Drew Brockington pushes CatStronauts team further than ever, adding in mounds of experiments, teamwork, and tuna fish by the ton!
